EVALUATE EXPRESSION THAT TAKES DIGITS, *, + USING LEX AND YACC

AIM:

To perform arithmetic operations that takes digits, *, + using lex and yacc.

ALGORITHM:

- Define rules in evaluate.l to recognize digits and ignore whitespace, returning tokens for numbers. Utilize yylval to pass token values to parser.
- Break down input into tokens (numbers) in evaluate.l, associating each with its respective value.
- Use parser (evaluate.y) to implement grammar rules for arithmetic expressions, considering precedence and associativity of operators. Generate a result for each expression.
- Implement error handling in evaluate.y to detect invalid expressions. Set a flag if errors occur during parsing.
- After parsing, check if the flag remains unset. If so, indicate that the arithmetic expression is valid; otherwise, display an error message.

PROGRAM:

evaluate.l:

```
%{  
#include<stdio.h>  
#include "y.tab.h"  
extern int yylval;  
%}
```

```

%%
[0-9]+ {
    yylval=atoi(yytext);
    return NUMBER;
}
[\t] ;
[\n] return 0;
. return yytext[0];
%%
int yywrap()
{
    return 1;
}
15

```

evaluate.y:

```

%{
#include<stdio.h>
int flag=0;

%}
%token NUMBER

%left '+' '-'
%left '*' '/' '%'
%left '(' ')'
%%
ArithmeticExpression: E {
    printf("\nResult=%d\n", $$);
    return 0;
}
E: E '+' E { $$ = $1 + $3; }
| E '-' E { $$ = $1 - $3; }
| E '*' E { $$ = $1 * $3; }
| E '/' E { $$ = $1 / $3; }
| E '%' E { $$ = $1 % $3; }
| '(' E ')' { $$ = $2; }
| NUMBER { $$ = $1; }
;
%%

void main()
{

```

```

printf("\nEnter Any Arithmetic Expression which can have operations Addition, Subtraction,
Multiplication, Division, Modulus and Round brackets:\n"); yyparse();
if(flag==0)
printf("\nEnter arithmetic expression is Valid\n\n");

}
void yyerror()
{
printf("\nEnter arithmetic expression is Invalid\n\n");
flag=1;
}
16

```

OUTPUT:

```

[root@localhost-live liveuser# vi 307_exp7.1
[root@localhost-live liveuser# vi 307_exp7.y
[root@localhost-live liveuser# lex 307_exp7.l
[root@localhost-live liveuser# yacc -d 307_exp7.y
[root@localhost-live liveuser# cc lex.yy.c y.tab.c
[root@localhost-live liveuser# ./a.out

Enter any Arithmetic Expression which can have operations Addition, Subtraction, Multiplication, Division, Modulus and Round brackets:
2+3

Result=5

Entered arithmetic expression is Valid

[root@localhost-live liveuser# ./a.out

Enter any Arithmetic Expression which can have operations Addition, Subtraction, Multiplication, Division, Modulus and Round brackets:
4*5

Result=20

Entered arithmetic expression is Valid

```

RESULT : To perform arithmetic operations that takes digits, *, + using lex and yacc has verified
